

Lab Safety Show—Special demonstrations of laboratory safety to raise risk awareness

Occupational Safety and health is an important topic in an everyday Laboratory work.

For the first time ever, analytica China 2016 introduced a special show on occupational safety and health, originated from its German parent trade fair analytica. Experts gave presentations on “Demonstration of risks and preventive measures for handling hazardous materials.”

This special show features live presentations on the following topics:

- Lab fire prevention and explosive treatment
- Safe handling of dangerous materials
- Protect you and your employee from health risks

Experts offer the audience practical tips on how to react in face of danger. Further, leading lab construction enterprises and experts gave talks on the lab construction and smart lab management.

Live experimental lecture from asecos: Demonstration of dangers and preventative measures when dealing with hazardous materials.

The experimental lecture by asecos GmbH examined the risks when dealing with hazardous materials in industrial surroundings, workshops and laboratories. The live show explained how to recognize hazards in advance and avoid undesired reactions by handling materials properly. Protective and preventative measures, labeling hazardous materials and legal guidelines were also discussed.
